DETAILED ACTION¹

(1)

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Ralph Dougherty on November 8, 2004

The application has been amended as follows:

In claim 22, line 1, "claim 20" has been deleted and replaced with --claim 21--.

In claim 23, line 1, "claim 20" has been deleted and replaced with --claim 21--.

In claim 24, line 1, "claim 20" has been deleted and replaced with --claim 21--.

(2)

Allowable Subject Matter

Claims 21-25 have been found to be allowable over the prior art of record.

(3)

The following is an examiner's statement of reasons for allowance:

The admitted prior art of the instant specification disclose that the lamination of a preformed elastomer (thermoplastic) film to a fabric through the use of an adhesive for use in airbags is known. The admitted prior art, however, does not specifically disclose that the fabric, prior to coating with an adhesive, is coated with a curing compound that increases the viscosity of an adhesive applied thereon such that upon application of the adhesive and pressure lamination of the thermoplastic film thereto, the curing compound reduces penetration of the adhesive into the fabric as compared to a fabric manufactured without the curing compound. U.S. Patent No. 3,936,542 to Cox, however, disclose that it is known to control the penetration of a coating material, such as a urethane into a fabric through the pre-application of a curing

¹ This action is a supplemental notice of allowability issued to correct the dependencies of claims 22-25. Claims 22-25 have been amended via an attorney-authorized examiner's amendment to depend correctly from independent claim 20.

compound, such as an amine, to the fabric such that the coating material, upon contact, self-thickens and swells to a very great extent forming stable highly viscous gels. Although it is generally known, such as taught by U.S. Patent No. 3,775,205 to Hermann et al., also drawn to film fabric laminates, to utilize a urethane adhesive cured by a trialkylamines, none of the prior art of record specifically teaches or suggests the method as set forth in applicant claim 21 wherein the curing compound comprises at least two amine moieties per molecule of curing agent and reduces penetration of the adhesive into the fabric compared with a coated fabric manufactured without the curing compound.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Amendments and Arguments

The amendments and arguments filed April 29, 2004 are acknowledged. In response to the amendments to applicant claim 21 and the arguments set forth on pages 4-6 of the Applicant's Remarks section, claims 21-25 have been passed to issue as set forth and explained in sections (1) and (2), above.

(5)

Drawings

The application having been allowed, formal drawings are required in response to this Office Action.
